

The role of semantics in the development from Web2.0 to Web3.0"

SDM – IMD New Gen Lib Workshop, 2008-02-25

Johannes Keizer
Information Systems Officer
FAO of the United Nations
Knowledge Exchange and Capacity Building Division

# This presentation

### 1. Introduction

Knowledge to combate Hunger and poverty

### 2. Important Developments

- The web becomes a mass activity
- Global Public Goods
- Going Digital
- "Web20"

### 3. The next Internet Revolution

- Requirements
- Does semantics matter?
- Bricks for the semantic web

### 4. The Agricultural Ontology Service

- Application Profiles
- AgroVoc
- Domain Ontologies
- Semantic Applications (Agropedia Indica)

# Millenium Development Goals

### Target year 2015

- Eradicate extreme poverty and hunger
- Achieve universal primary education
- Promote gender equality and empower women
- Reduce child mortality
- Improve maternal health
- Combat HIV/AIDS, malaria and other diseases
- Ensure environmental sustainability
- Develop a global partnership for development

http://www.un.org/millenniumgoals/

# Cross Cutting Issues for our Future Work

- Knowledge management;
- Policy support and the development of policy and strategy;
- Capacity building;
- Basic data and statistics;
- Environment and natural resource management;
- Emergencies and rehabilitation; and
- Gender mainstreaming and women's empowerment.

### WAICENT Highlights

5 February 2008 Over 11 000 new bibliographic records added to AGRIS Repository.

31 January 2008 Crop Wild Relatives Ontology Browser is now available online!

16 January 2008 Opening the content of agricultural repositories using Open Archives Initiative (OAI) framework

9 January 2008 LAST CALL FOR PAPERS: Special Issue on Agricultural Metadata & Semantics International Journal of Metadata, Semantics and Ontologies

■ What's new on the FAO Web site

PARTNERS

Glossary of FAO Databases and Information Systems

### FAO Web site directory

This Web site directory provides links to approximately 250 main sites and subject entry points.

#### Animal Production & Health

Animal Health, Animal diseases & Control, Animal genetic resources & Breeding, Animal nutrition & Feeds, Production & Livestock, more

### Economics & Policy

Agroindustry, Economic development, Policies, Trade, Marketing & Commodities, more

#### Education & Extension

Communication for development, Education, Extension, Training & Capacity building, more

### Engineering, Technology & Research

Biotechnology, Geographical information systems, Postharvest technology, Research, Statistics, more

### Farming Practices & Systems

Farm management, Farming systems, Land use, more

### Fisheries & Aquaculture

Aquaculture, Development, Ecosystems, Governance, Issues,

#### Forestry

Assessment & Monitoring, Environment, Forest management, Forest products & Services, Forest resources, more

### Geographical & Regional Information

Africa, America, Asia, Europe, Oceania, more

### Government, Administration & Legislation

Administration, Agricultural and rural legislation, Environmental legislation, Fisheries, Food legislation, more

### Information Management

Databases & Information systems, Documentation, Early warning systems, Geographical information systems, Information science, more

#### Natural Resources & Environment

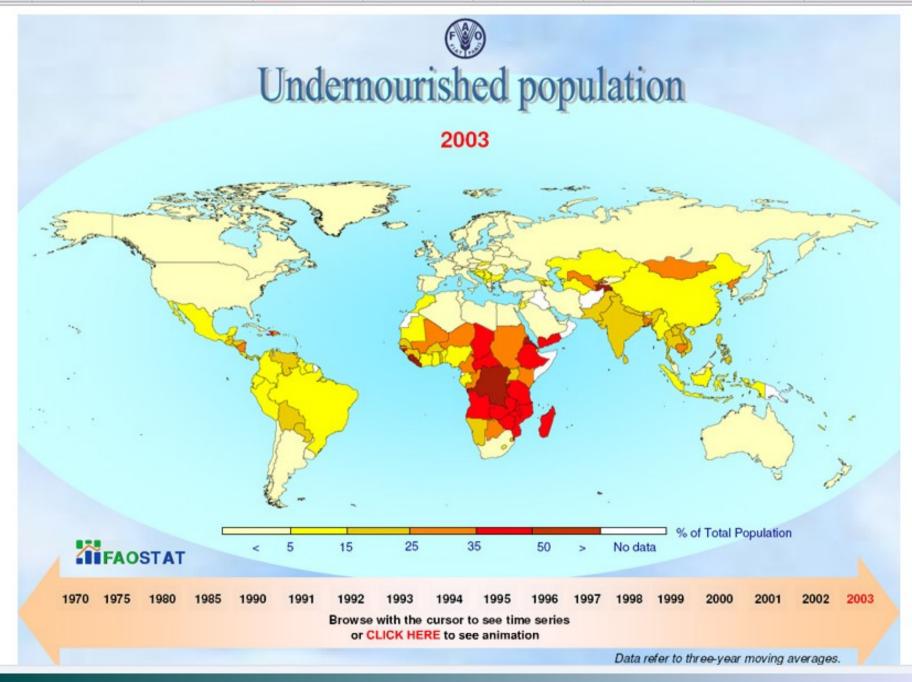

Biodiversity, Climate change, Desertification, Drainage & Irrigation, Ecology & Ecosystems, more

#### Plant Production & Protection

Crops & Crop management, Fertilizers, Integrated pest

# Important Developments

- 1. The web becomes a mass activity
- 2. Global Public Goods
- 3. Going Digital
- 4. "Web20"

## The web becomes a mass activity

### Internet Usage Growth 1995 - 2006

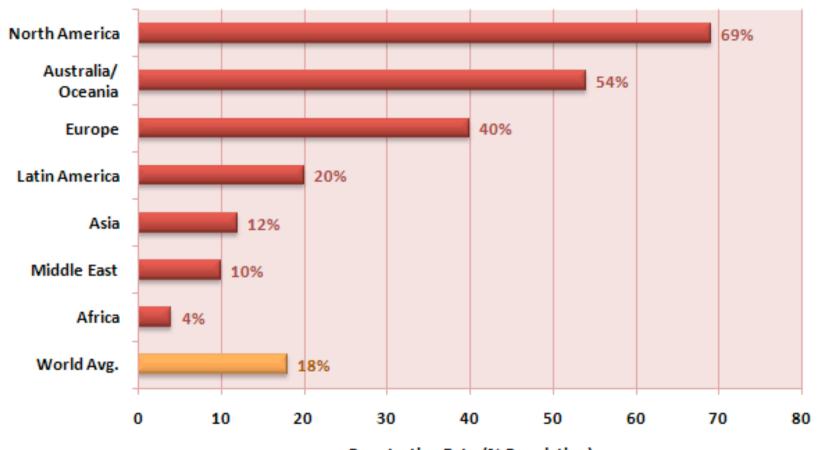

## The web becomes a mass activity

### Internet Penetration by World Region

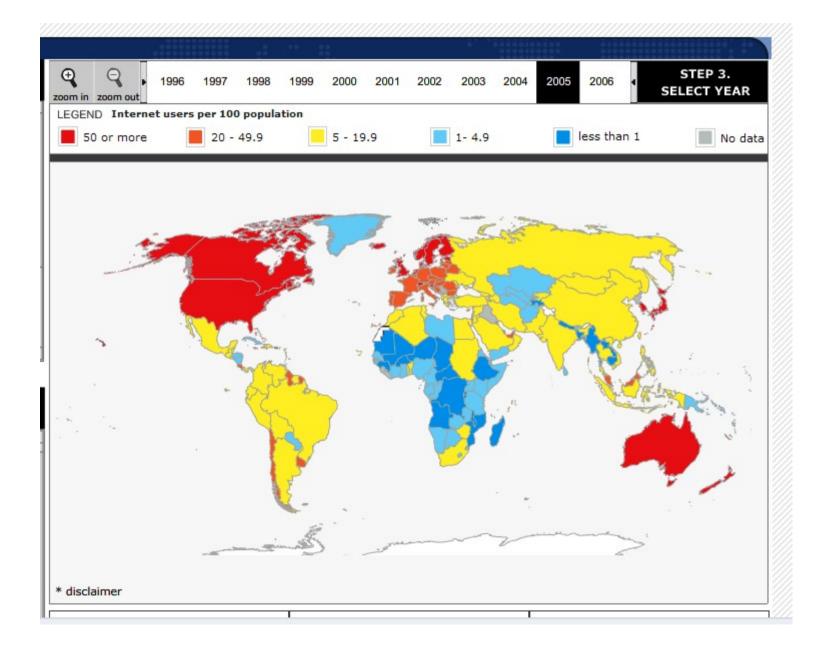

Penetration Rate (% Population)

Copyright © 2007, www.internetworldstats.com

helping to build a world without hunger

# Internet Usage in 2005

# Internet Usage the tendencies

Internet Users/100 population	2000	2005
India	0.54	5.44 ( 61 Mln)
China	1.77	8.44 (112 Mln)
USA	44.06	66.33 (200 Mln)
Germany	30.15	43.17
Ghana	0.15	1.81
Sweden	45.08	76.21

Source: Millennium Development Goals Monitor

## Global Public Goods

The Open Access publishing Paradigm gets mainstream

 Research Results available as global public goods (Gene Ontology, CGIAR Programs)

 Substitution of proprietary software by open Source

# Open Access Publishing

- Started in 90s in Los Alamos
- Now mainstream for all bigger research organizations
- Mandatory in US and UK for research done with public funding
- No change in scholarly publishing system, but in addition institutionally and subject repositories
- Most scholarly publishing available in open access with OAI-MPH protocol in the next 20 years?

# Going Digital

- Most formal knowledge will be digitally accessible
  - Institutional Repositories
  - Googlebooks and related projects
  - eGovernment?
  - Everything what you want to buy in ecommmerce(Amazonization?)
- Also tacit knowledge becomes explicit
  - Wikis
  - Blogs
  - Question and Answer Services

## Web 20

- People on the web
  - Wikipedia (becomes mainstream information source)
  - Blogs for (nearly) everyone
  - Social Networking (MySpace, Facebook)
- More structured data
  - CMS Inflation and
  - Tagging Folksonomies
  - Much more semistructured data and semi-defined semantics??
     With a lot of metadata

Web 20 is more about people than about technology, some Web20 technology is even old(Wiki, Blogs) - the difference is the mass participation of people in the web

## An what is to come

- 2 billion Internet users in the world in 2010 !?
- All relevant content will be digitally (and mostly freely) available!?
- 10 Million internet users with their own blogs?
- 100,000s of Folksonomies!?
- Most of Internet Continent in CMS or semistructured databases!?
- ICT Literacy of Internet Users will increase by order of magnitudes (today a majority f users of Internet ICT tools are "illiterate")!?

# Some requirements to a global network

- Does the knowledge/ information/ resource I need exist?
- 2. Where is it?

(Questions for reference librarians)

- 4. How can I use this knowledge for my own business
- How can I collaborate with others over the network

## Where is it

Up to know a satisfactory solution has been found only for Question 2

"Where is it?"

If you know precisely for what you are looking, and if it is present on the web, Google will most probably find it for you

## Question 2

1. Does the knowledge/ information/ resource I need exist?

here is a bias: (some people think they can investigate this)

telling a story from the preparation of my last summer holidays

# The problem of meaning

- Input to the Internet is mostly given by humans, but the information is processed by machines (computers)
- Humans can interprete Information
  - Semantic and Linguistic Agreements
  - Inferences through known relations (a cow is a mammal)
- Computers see only bit streams and transfer them into strings and other visible objects or they see strings and other visible objects and transfer them into bit streams

What can be done to teach them meaning?

# The problem of meaning (2)

cow, mucca, vacca, Kuh, vache, بقرات , गाय ,

...in a certain environment the same concept...

..you know, a Computer does not know

## Questions 3 + 4

- doing business and collaborative work on the web
  - very, very poor
    - How often do you need to register to access information
    - How easy is it for you to personalize information streams?
    - email dominates communication leading to wrong communication structures
    - social networking exists on proprietary platforms only, no social working exists, it is even complicated to link to your peers
  - the problem is also here, computer cannot interprete information

# Why metadata tags were a failure

- DC 1995
  - tried to copy library cataloguing to the web
  - but catalogues were interpreted by humans, not by machines
  - computer could not understand the meaning of the metadata
- Semantic Identification of knowledge objects and concepts within knowledge objects

### **Knowledge Objects**

- it's a Hotel
- it's a CV
- it's a Recipe
- it's a political journal

### Concepts

- it's a cow
- it's a Person
- it's Johannes Keizer
- it's ......
- Unvalidated Metadata are useless

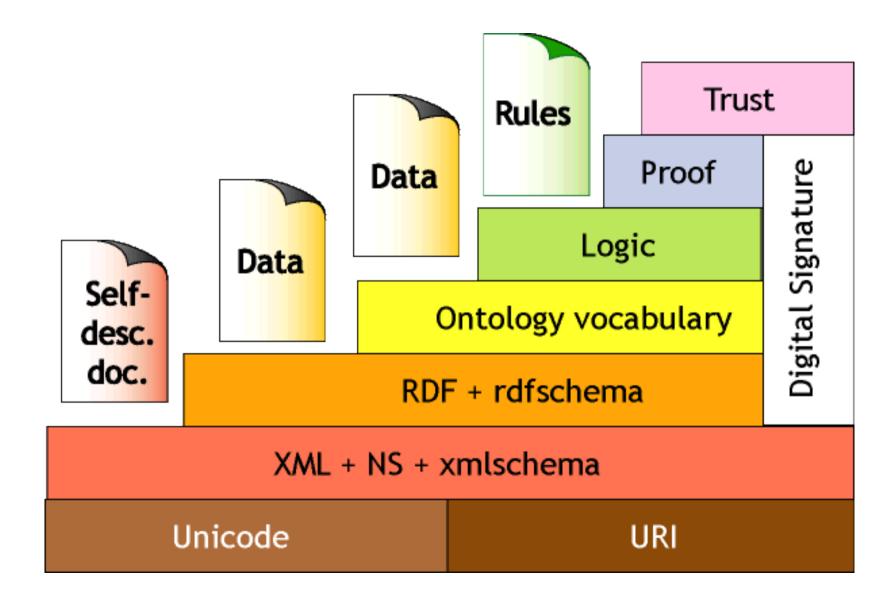

## Semantic Identification of Metadata/data

- How can computer validate Information
  - it must find a machine interpretable information
- Trusted Namespaces with standard URIs (Ontology Vocabulary Registries)
  - Persons, Organizations, Projects, Conferences
  - Concepts, thesauri, ontologies
- To be established by standard bodies or communities of practice

## Sir Tim's Vision of the semantic Web

### Agricultural Ontology Service

## AGROVOC

 Thesauri, were traditionally the tool of librarians to describe the content of a document

 They are now basis to describe knowledge and meaning in a machine readable way

 AGROVOC was maintained by FAO since the 80s
